How is cord blood used today?

In the treatment of nearly 80 life-threatening diseases, including genetic disorders and cancers.

In 22% of all stem cell transplants and nearly 50% of all pediatric transplants.

In more than 30,000 medical treatments worldwide over the past 20 years.

What makes it so special?

Cord blood stem cells offer:

- FLEXIBILITY
- ACCESSIBILITY

Who can use it?

It depends on the condition being treated and it’s up to a doctor to decide.

Does it expire?

When stem cells are properly stored and processed, scientists believe they should last indefinitely.

Where is the research headed?

Cord blood stem cells are being studied for potential use in treating illnesses including:

- spinal cord injury
- stroke
- cerebral palsy
- Alzheimer’s
- muscular dystrophy
- type 1 diabetes
- autism
- muscular dystrophy
- stroke
- cerebral palsy

It’s estimated that 1 in 3 people may benefit from regenerative therapies.  

Disclaimer: Banking cord blood does not guarantee that treatment will work and only a doctor can determine when it can be used. Research is ongoing.
