

Caution: For Laboratory Use. A product for research purposes only.

## Cyanine 5-CTP

Product Number: NEL581

**QUANTITY:** 100 nmol  
**FORM:** 10  $\mu$ L solution  
**CONCENTRATION:** 10.0 mM  
**SOLVENT:** 10 mM Tris-HCl, pH 7.6, 0.1 mM EDTA  
**FORMULA:**  $C_{44}H_{55}N_6O_{21}P_3S_3$  **FW = 1193**  
**EXTINCTION COEFFICIENT:** 250,000  $M^{-1}cm^{-1}$   
 (650 nm, Phosphate buffer, pH =7)

**EXCITATION MAXIMUM:** 650 nm  
**EMISSION MAXIMUM:** 668 nm

## INTRODUCTION

Fluorescent nucleotide analogs<sup>1</sup> are biologically active with a variety of DNA and/or RNA polymerases. Labeling methods such as: nick translation, random priming, polymerase chain reaction, 3'-end labeling, or transcription of RNA using SP6, T3, or T7 RNA polymerases may be used. Some analogs demonstrate variations in relative performance depending upon nucleotide and fluorophore selected due to enzyme preferences. Labeled probes may be used in applications

including (but not limited to) chromosome mapping<sup>2</sup>. These analogs are intended to be detected directly by their fluorescence properties. **For additional information: call 1-800-762-4000 or visit our WEB site at <http://las.perkinelmer.com>**

## QUALITY CONTROL

The nucleotide analog is purified by HPLC chromatography. Analytical HPLC is used as a quality control check to ensure chemical purity >95%. UV/VIS absorption spectra are obtained in aqueous phosphate buffer to determine concentration. Relative fluorescence quantum yields are not necessarily the same for the four different base nucleotide analogs.

## STABILITY AND STORAGE CONDITIONS

Nucleotides labeled with fluorophores should be protected from extended exposure to light. These nucleotide analogs are stable kept in a refrigerator or colder for at least 1 year. Minimizing freeze-thaw cycles and exposure to light are the most critical factors to consider for long term usage.

### For Research Use Only:

<sup>1</sup>Those products incorporating a cyanine dye are covered under the following issued US Patent Nos: 6114350, 6197956, 6204389, and 6224644 on the cyanine dye precursors, uses and labeled moieties.

<sup>2</sup>This product may not be used for DNA sequencing unless (a) used with a DNA sequencer instrument purchased from PerkinElmer Health Sciences, Inc. or its sublicensees, or (b) a separate license for such use is obtained from Applied Biosystems, Inc., Foster City, CA.

<sup>3</sup>The use of this product for primer extension may be covered by one or more of the following US patents (or their foreign counterparts): 5888819, 5952174, 6004744, and/or 6013431, and to the extent covered may not be used unless a separate license for such use is obtained from Beckman Coulter, Inc., of Fullerton, CA.
