STABILITY AND STORAGE RECOMMENDATIONS: When adenine, [2,8-³H]- is stored at 5°C in its original solvent and at its original concentration, the rate of decomposition is initially 2% per month from date of purification. Stability is nonlinear and not correlated to isotope half-life. Lot to lot variation may occur.

- Aqueous solutions of adenine, [2,8-³H]- shipped from stock are stored no longer than 3 months. A 70% ethanol solution is recommended as a solvent if the compound is to be stored longer than 3 months as the material has been found to be much more stable in this solvent.

SPECIFIC ACTIVITY RANGE: >15 Ci/mmol (555 GBq/mmol)

RADIOCHEMICAL PURITY: This product was initially found to be greater than 97% when determined by the following methods. The rate of decomposition can accelerate. It is advisable to check purity prior to use:

High pressure liquid chromatography on a C18 column using the following mobile phase:
1% triethylamine acetate pH4 : acetonitrile, (9:1).

HAZARD INFORMATION: WARNING: This product contains a chemical known to the state of California to cause cancer.
